Back End: AWS, REST Apis, Node js, Lambda, GraphQI

DevOps: SDLC & Azure, Github, Gitlab, Git, Monday, Figma

EXPERIENCE

Application Developer
Wakencode Technologies

Gurgaon,India
02/2022 - Present

· Developed visually appealing and user-friendly web applications using React with Ant Design components, a widely known CSS library used in React applications.
· Streamlined development process with Redux Toolkit for state management, Axios for HTTP requests, and Formik/Yup for form management and validation.
· Enhanced code maintainability and type safety by leveraging TypeScript, persisted application state between sessions with Redux Persist, and optimized date/time functionality with Moment.js

Software Trainee
Wakencode Technologies

Gurgaon, India
07/2021 - 01/2022

· Developed dynamic E-commerce websites using Salesforce Commerce Cloud, integrating products, catalogs, and customer details through Business Manager.
· Managed Demandware scripts, Business Manager Configurations, Controllers, and Pipelines for optimized functionality.
· Expert in updating and creating products, catalogs, and price books using Business Manager and ISMLs.

PROJECTS

Service Activator
03/2022 - Present

app.shaktimaan.myserviceactivator.com/
Service Activator is a comprehensive web and Android app for managing tasks in large organizations. It facilitates job creation, work order management, check-in/out times, geofencing, and more.
Job Role
· Real-time data handling for check-in/check-out times with accurate time tracking.
· Documentation creation and maintenance for code, APIs, and project aspects.

Feedback-myApp - React based
05/2023 - 06/2023

React-based application designed to streamline and enhance your feedback process
• View and manage feedback: Easily access, filter, and analyze submitted feedback to gain valuable insights and identify trends.
• The tech stack used in this project includes React JS, JavaScript (JS), CSS, Material UI, Git, and GitHub.

Hospitality Management System - Dr.Latika Duhanvvc
02/2020 - 05/2020

• The Hospitality Management System is a web-based application designed to streamline hospital management by storing and accessing patient information, tracking patient progress, and identifying trends for personalized care planning.
• The tech stack used in this project includes XAMPP server, PHP, HTML, CSS, and Bootstrap.
